

Sales Performance Dashboard

Sales Performance Dashboard

Project Report

Prepared by: Kalpana Chaurasiya

Tool Used: Microsoft Power BI

Dataset: Sample Superstore

Date: June 2026

Introduction:

This report presents the Sales Performance Dashboard built using Microsoft Power BI. The objective of this project was to analyze retail sales data and present key business insights through interactive visualizations. This project was created as part of learning Power BI for data analytics.

Objective:

- To analyze sales and profit across product categories
- To identify top-performing regions
- To create an interactive dashboard with filters
- To practice data import, visualization, and formatting in Power BI

Dataset Used:

Name: Sample Superstore Dataset

Source: Kaggle (Free Download)

Format: Excel (.xlsx)

Total Sheets: 3 (Orders, People, Returns)

Key Columns:

- Order ID, Customer Name, Segment
- Region, State, City
- Category, Sub-Category, Product Name
- Sales, Profit, Discount, Quantity

Tools Used:

Microsoft Power BI Desktop

Microsoft Excel (for dataset)

GitHub (for project storage)

Dashboard Features:

Visual 1 - Sales by Category (Bar Chart)

Shows total sales for Furniture, Technology, and Office Supplies.

Finding: Technology has the highest sales.

Visual 2 - Profit by Category (Bar Chart)

Shows profit earned per category.

Finding: Furniture has the lowest profit despite decent sales.

Visual 3 - Sales by Region (Bar Chart)

Shows sales performance across West, East, Central, and South.

Finding: West region has the highest sales.

Visual 4 - Total Sales Card

Displays overall total sales figure: 2.29 Million (approx.)

Visual 5 - Segment Slicer (Filter)

Interactive filter for Consumer, Corporate, and Home Office segments.

When clicked, all visuals update automatically.

Skills Learned:

- Data import from Excel to Power BI

- Creating Bar Charts, Card visuals, and Slicers

- Applying Dark Theme and custom colors

- Understanding cross-filtering between visuals

- Publishing project to GitHub

Conclusion:

This project helped in understanding the basics of Power BI including data loading, visualization creation, and dashboard designing. The Sales Performance Dashboard successfully presents key business insights in a visually appealing dark theme format. This project serves as a foundation for building more advanced dashboards like the HR Attrition Dashboard using Star Schema, DAX measures, and Row Level Security.
